

anaphora

MEANINGFUL CONNECTIONS, LASTING STORIES

AI-native matchmaking · Consumer dating & relationship technology

Louise Plessis

Capstone Round 2 · Strategic & Compliance Review

Loneliness is rising. Swiping isn't fixing it.

75M

single-adult EU households,
+17% since 2015

8%

of EU adults have no close
friends

60%+

dating-app uninstall rate

Users aren't leaving dating apps — they're leaving the swipe mechanic.

One conversation, instead of endless choice

Conversational NLP + generation + retrieval-augmented matching

A conversation builds your Blueprint

One guided AI conversation replaces the profile form.

A friend adds a private perspective

Feeds real matching signal — raw answers stay private.

Matches come with a reason

Explainable, reciprocal — never a black-box score.

Proving the core idea, before building the rest

- Built on the same core approach: LangChain + GPT-4o conversation, structured extraction.
- Proved the core capability worked: real conversation → real structured signals.
- Didn't yet have: RAG matching, friend input, or any real testers.

This result is what earned the green light to build the full product.

From POC to a real, tested product

Live at anaphora-app.netlify.app

- ♥ Reciprocal, explainable RAG matching
- ♥ Friend input — private by design
- ♥ Tested with 21 real users, live

61%

of starters completed a full
Blueprint

21

private testers, real usage data

Below our 70% target — exactly the useful signal for what to fix next.

Honest math: pre-revenue economics

≈23,700

users needed to break even — not reached by month 36

−100% / −94%

12- & 36-month ROI — expected at pre-revenue stage

These are estimates from industry benchmarks. To be validated during the pilot.

Top 3 risks — and why they're manageable

♥	Cold-start density	Not enough matches in one city	Single-city Paris launch + local event partnerships
♥	Consent strength	Sensitive-data consent is implicit today	DPIA done; explicit consent step before pilot
♥	LLM dependency	Every core feature runs on one provider	Client already centralized — fallback-ready design

These risks are manageable — here's how we're addressing each one.

Compliant by design, not by accident

LIMITED RISK

Not prohibited, not high-risk. Transparency duties already met: AI disclosure on-screen, AI-content notice live.

DPIA complete for the highest-risk processing. Data hosted in the EU (Frankfurt). Consent step is next.

Deployable compliantly: EU-hosted data, disclosed third-party processing, Limited Risk obligations met.

Open gap: an explicit consent checkbox for sensitive inference, before scaling past this pilot.

Pilot → Full Deployment → Scale

Go-to-market

Paris singles, reached through friend invites and local events.
€14.99–€29.99/month subscription. No competitor combines explainable, multi-source matching.

Pilot → Full Deployment gate

Pilot KPIs met · ≥5% conversion observed · seed funded · no open compliance gap.

Commercialisation: freemium subscription (not pay-per-match) — predictable recurring revenue to plan hiring and city expansion against.

CONCLUSION

The path forward

“

We don't believe in perfect matches.
We believe in meaningful fit.

VALUE

Anaphora replaces swiping with honest conversations.

COMPLIANCE

Limited Risk under the EU AI Act, GDPR-reviewed, EU-hosted data.

NEXT STEP

A 60-day Paris pilot — 500 users, real conversations, real matches.

Thank you...

“The person you’re looking for is a story you tell in many ways. Anaphora listens for what repeats.”

AUTHENTIC

Real people,
real intentions.

MINDFUL

Designed for
well-being.

INTELLIGENT

AI that explains,
not just predicts.

TRUSTED

Privacy-first,
EU by design.
